

Resistance thermometers
Precision resistance thermometer
Model series Pt100

Application areas:

- precision and fast measurements with an accuracy up to 0.02K
- recommended for temperatures of -80...250 °C, with carefully annealed and selected glass type sensing elements class A according to DIN EN 60751
- an optional DAKKS or inhouse calibration guaranties traceability to national standards

Delivered in an attractive transport and safe box.

Temperature sensor

Pt100

Yearly stability

typ. 0,04K

Protective tube material

1.4571

stainless steel

Protective tube diameter d

4 mm

Type of connection cable

Te C Si 4xAWG24, Cu-strand

Connector

ø 4 mm hollow plugs, gold plated
